Emailing Text Annotations: AutoCAD® 2019 introduced emailing of text annotations and the associated drawing files. Now, users can copy and paste any text annotation into a new drawing, without having to send a new file. (video: 1:06 min.) Geometry Delimiting: Geometry delimiting is a new measure and tool option for assembling and arranging objects. Use it to re-order your components, create or update an assembly drawing, or make design changes. This feature also includes the ability to extract, edit, and reapply the geometry delimiting style from a parent drawing to child drawings (or drawings in the same drawing). (video: 1:23 min.) Calculation and Drawing Tips: The Speedometer tool lets you use a counter to measure the number of times a command or series of commands has executed on your drawing, so you can identify time-consuming tasks. New calculation tools, improved calculation variables, an easier to use dynamic calculator, and a new display format make it even easier to evaluate performance. In addition, the drawing tips find and highlight features that affect performance in your drawings. A new feature keeps the line you are drawing straight, so it doesn't drift from the model. (video: 1:14 min.) 3D Alignment: The 3D aligning tools let you align 3D layers, freehand 3D, or 2D and 3D objects. The new 3D aligning tools allow you to use a keyboard to align objects quickly and accurately, and use either a laser or digitizer to trace over the model to create a freehand alignment of the object.
