I found a problem with the installer. Since I am just the author of the screensaver and I don't like to use Adfly advertising (because they support those spyware companies), I decided to test something. The previous version of the installer didn't work, so I changed it and just one click to the "Share" button. It doesn't install, it only show you the buttons. I tried to repair it with the same problem, but it didn't work. I don't know what's happening and I don't know how to fix it. I don't want to use the installer of the previous version. Any solution?
