Program allows you to recover the files that are lost due to operating system crash, formatting and virus attack. Download Free Now: Features: Recover all types of FAT file system Recover lost or deleted FAT hard disk partitions Recover lost or deleted FAT32 partitions from a removable drive (USB, DVD, CD etc) FAT Recovery software - Free Edition is free of charge and ready to use for individual and business users. However, you may need to have the license key to use this application in the full version.Q: How can I efficiently scale out / distribute a large number of ArcGIS server 10.3 instances? My current architecture is built on Windows Server 2008. I have a couple of dozen large polygon datasets that I want to display, and of course need to keep the data online while the user is creating/editing it. I have one large Windows Server (8 cores, 16GB RAM) dedicated to this purpose. The idea is to run each polygon dataset in an ArcGIS Server 10.3 web application that allows me to easily update their attributes. I would like to start scaling this out to as many ArcGIS Server instances as I can to keep up with demand. Is there a best practice for distributing the number of ArcGIS Server instances? I'm envisioning that if a user wants to add/edit a polygon, they will get a dialog box that asks for their username/password, and then the server will start a new instance and return a response to the web client. Do I need to be concerned about memory sharing between the processes? Is there a best practice for ensuring the ArcGIS Server is always up and responsive? A: For scale out across multiple machines, you can use the ArcGIS Server Scaleout Appliance. The appliance image comes with a shared storage volume that you can use to share data. If you need to distribute ArcGIS Server instances across multiple machines, then use Load Balancing, which is the recommended approach. This allows you to route user requests to any instance in the cluster. In addition to distributing ArcGIS Server instances, you can also scale out services across multiple machines, such as Web Map services, ArcGIS Portal Server, and SharePoint.

What's New In FAT Data Recovery Application?

FAT Data Recovery is the easy to use data recovery software to get back your lost files from different hard drives, including MS Exchange, FAT, NTFS, MAC and so on.
