Make sure it is set to "Save as type" and to "Save in Photoshop's default folder." Add a New Layer Windows Click the "Layer menu" button (it looks like a plus sign) at the top-left of the Photoshop window. A menu will appear at the bottom of your document with four options: "New, "Edit, "New Layer, "New Path." If you are in the Edit layer, click "New Layer" to add a new layer to your document. Choose "New Layer" or "New Path" to add a new layer to your document. Mac Open the "Layers palette," which should be in your top toolbar on the left side of the Photoshop window. A red line with a plus (+) sign to the right of a layer name. Click that to add a new layer to your document. Click the layer name to select a layer. A "locked" icon appears to the left of the layer name. Click the "Locked" icon at the left of a layer name to lock the layer. It is important to lock the layer with any important settings or layers that have been altered with fill and stroke settings. Drag the mouse over a layer to change the color

Since it was introduced, Photoshop has evolved into one of the most influential software applications for photo editing. No other image editor can match Photoshop for creating high-quality images or editing photos, shapes, colors and vectors with ease. It has played a major role in the development of the first cameras, as well as the creation and manipulation of images in different industries. However, Photoshop Elements is not a clone of Photoshop and differs from the pro version in the sense that you will be able to do image editing, retouching and manual photo editing without the use of any type of editing tools but by using keyboard shortcuts. It is a very powerful program, and it comes with a wide range of photo editing and creation features. The Basics of Photoshop Elements The Photoshop Elements help desk team has simplified this guide to cover the most commonly used features and functionalities. Also, we have added a great collection of 10 Photoshop Elements tutorials to help you learn the basics of the program. We have divided the guide into 2 sections: Photoshop Elements 10 and Photoshop Elements 11. Q: PHP: What is the proper way to convert between time and date? I know it has been discussed multiple times. But I'm still struggling to understand how time and date works. So for example... In German we say: "Ich bin 14 Uhr und 10 Minuten wieder am Arbeitsplatz" or just "Ich bin am Arbeitsplatz". It is clear that the datetime is "14 Uhr 10 Min" but in seconds. I know that these represent: 14:00:10 as 14:00 and 10:10 as 14:00 and 10 min and 20 as 10:00 and 20 minutes But what does 14:00:10/20/2014 mean? I couldn't understand in what format a time like this is, although I know it should be a string. A: Here's a table showing the notations you refer to. To convert, i.e. to obtain the equivalent in German, it might help to know that the 24-hour clock is used in Germany instead of the 12-hour clock. Thus, an example of the time-and-date notation: 10:10:20 on 01.01.2013 can be written as 10:10 20.01.2013 So, in 14:00:10/20/2014 the /20/2014 is a fraction of a second, in other words, 14:00:10 22.01.2014 and the last part of the "date" is a day-of-month, which means 14:00 10th of January 2014. A: In Germany we use a 24 hour clock in which the hours run from 0 to 23 and the minute runs from 0 to 59 (and 0 to 59 if it's a decimal hour). If you want to see all that at work, visit When converting to other countries, hours run from 0 to 23 and minutes run from 0 to 59 (there is no minute at the end!). How to represent this in a formated date? So, 14:00:10 is the time, the minutes of that hour, to two decimal places (which of
