GreekTranscoder is a program which converts polytonic Greek characters written using one text encoding into another one. Its primary goal is to allow the conversion of documents using older fonts and encodings into Unicode fonts. However, it also allows converting text between older encodings as well as from Unicode into those obsolete formats. Currently GreekTranscoder supports the following legacy encodings: ☐ Beta Code ☐ GreekKeys ☐ LaserGreek ☐ Paulina Greek ☐ SuperGreek ☐ Vilnius University ☐ WinGreek (and Son of WinGreek) Requirements: ☐ Microsoft Word 2000 or later (and consequently a Windows release that supports that version). Microsoft Word 97, although it supports Unicode, uses an older and incompatible version of Visual Basic Key Features: 1. It is a standalone command line tool. You don't need an installer. Simply open the executable file and start the program. 2. It converts Greek characters from one encoding to another one. 3. It supports the following Unicode formats: Unicode 6.1 (Greek codepage Windows 2000 or greater) Unicode 6.2 (Greek, codepage Windows 2000 or greater) Unicode 7.0 (Windows 2000 or greater) 4. It supports saving the destination encoding in files with different extensions such as.doc (Windows 95/98/NT),.docx (Windows XP),.docm (Windows Vista), and.dotx (Windows Vista). 7. It allows to convert words/sentences/paragraphs as a whole or by word/chunk. 8. It can also convert multiple files at once. 9. It can also be used to: - convert all supported fonts in a document from the source encoding to the

The program was developed by Chris Hext and Michael Farkas. It is designed to allow the user to convert files that contain older Greek fonts into the Unicode format, without losing information. Although the conversion works as intended, the program has no predefined font to apply, so all the text is converted at once. This means that it may be necessary to retranscribe some text to fix some characters. Because of this, GreekTranscoder cannot be used as an automated tool. This article or section needs to be cleaned up to conform to a higher standard of quality. Please remove this notice when finished. Category:Windows-only software Category:Greek-language websites Category:Greek-language computing Category:Greek-language en_US Effects of sulfide on diastolic flow in the left ventricular outflow tract. Abnormal diastolic flow patterns in the left ventricular outflow tract are related to left ventricular diastolic dysfunction and coronary artery disease. Some data suggest that sulfide, a product of hydrogen sulfide metabolism, may be a novel antihypertensive agent that also has diastolic properties. We hypothesized that sulfide would alter flow patterns in the left ventricular outflow tract and that these changes would be dependent on the amount of sulfide in the infusion. Eight sheep underwent placement of a flow-sensing, pressure-measuring conductance catheter in the left ventricular outflow tract. Control hemodynamics were measured at baseline with infusion of 0.9% saline. Sulfide was then infused at 10, 20, and 30 microg/kg per minute for 5 minutes followed by a washout period of 5 minutes. Baseline cardiac output and pulmonary capillary wedge pressure were 6.9 +/- 0.5 L/min and 12 +/- 3 mm Hg, respectively. Sulfide caused a significant decrease in systolic, diastolic, and mean arterial pressures of 11 +/- 4, 12 +/- 3, and 14 +/- 3 mm Hg, respectively. There was an increase in systemic vascular resistance of 13 +/- 4 mm Hg x L/min. Cardiac output was increased by 30% to 8.8 +/- 1.1 L/min. Left ventricular diastolic filling was slowed with an increase in end-diastolic pressure and mitral Doppler early diastolic peak velocity. We observed a significant correlation between end-diastolic pressure and Doppler early di

Multiplayer works to both your advantage and disadvantage. Good thing you're in multiplayer. A massive fan of the trilogy, I tried to make something that doesn't feel like it is ripping off what came before, while including a few very small nods to the past. The writing is lighthearted,
