Overview Changes Results Rename Restore Default Reverse Order Revert Reset Save Restore Step One Open the program and find the shortcut for your favorite desktop layout configuration. You can do this by selecting "New" and entering the path to the config.default file in the dialog that opens. This will quickly generate a shortcut to the configuration file, which you can then launch or drag and drop to your desktop. You can also select any of the included templates to find a combination to satisfy you. Step Two Now that you've been able to set up your desktop layout, you can simply find the bar with your home desktop folder in the middle and drag to the left or right to arrange the icons however you want. It's easy to rearrange icons to your own liking, but making shortcuts will be easier for those not familiar with the layout. Since this program has a major focus on desktop customization and to keep desktop settings in order, moving icons between folders is a simple matter of dragging to the opposite side of the bar. Even with the best intentions, the process of paying with a credit card can get a bit messy. It's true that credit cards are designed to make it easy for people to make purchases, but it's also true that most consumers aren't entirely aware of the details behind online transactions. In order to ensure smooth sailing, follow some basic guidelines when transacting online. Consider details about any purchase Before making a purchase online, make sure that the site is legitimate. Legitimate sites will always have the following properties: • An SSL symbol in the address bar • A website address or a URL that matches the domain name of the site • A valid payment processor that's online at the time the transaction is taking place • A privacy policy in place Typically a company or site that is aiming to make money will have a privacy policy that clearly states what information they're collecting, where it will be stored, what the length of time they're going to be keeping this information, and what you can do with it. Additionally, a company that aims to make money generally offers sales and offers discounts to people. If you can't find these, it's a good idea

Smir is the tool that lets you create, save and restore your preferred desktop layout. Smir License Key: Free trial Size: 10.12 MB Customize the desktop and set your own wallpaper wallpaper. If it is a simple change of resolution, the application cannot be used. Install with ease Download here: Customizer 2012 Customizer 2012 is an excellent (no pun intended) application to help customize your PC's desktop wallpaper in a pretty efficient way. It's free to download and install and is actually a standalone program, so there's no need to add any icons to the desktop when using it to set your desktop background image. The tool is pretty easy to use once you've downloaded it, and is mainly divided into two sections: 1) Information and 2) Tweaking. The Information Panel On launch, you will first be greeted with a window informing you that the program needs a license first, and that a key can be activated from the help menu if you are not happy with it. You can only access the application after doing so. Before using the program, it's a good idea to know that you can save your current desktop layout configuration in the application, and then bring it back when needed. In the menu bar at the top right of the window, you will see three options: &Options; &Help; &Exit. Information Panel Click on the second option of the menu bar to bring up the window with all the additional features available in the program. It shows up as a pretty compact window on the desktop and provides a quick pointer to the program help menu. General Options First of all, this is where you can set the system requirements for the program to run smoothly. In this instance, it's your version of Windows and should be sufficient enough, but if it doesn't run on your PC, it will let you know. Next is the option for about, which will inform you on the version and number of external applications installed on your PC. Appearance Tab With it, you can choose from several categories of background options. From there you can select from: 1) Wallpapers and 2) Images. The latter provides you with the option to add your own images from your hard drive, either folder, or camera. You will also be able to choose the layout of your desktop from one of the four options provided, and the pattern, color, background,
