## AutoCAD Crack License Code & Keygen

Developers and original equipment manufacturers use the AutoCAD native programming interfaces for scripting, as well as for integrating AutoCAD directly into their applications. Revit, BIMS and ArchiCAD are Autodesk's BIM, Building Information Modeling software, as well as the oldest Autodesk BIM application that is still developed in-house, though now shared with the ArcGIS (data) software suite. History AutoCAD's history extends to 1979, when it was designed at the request of Steve Jobs as the CAD application for the Apple II personal computer. At the time, Apple and Microsoft were in competition for CAD software for the PC, and AutoCAD was a major selling point for Apple. It was available as part of the Apple Lisa in 1978, as well as its successor, the Apple II in 1981. When the Apple II became available as a hardware-software bundle in 1980, it came bundled with a version of AutoCAD. In 1985, in response to a growing market of Macintosh computers, the Apple II version was discontinued and an Apple Macintosh version became available. The Apple Macintosh version was first released in 1986 and was initially named "Microsoft MotionPro". It was renamed AutoCAD in 1990. The name "AutoCAD" was chosen by the software's co-creator, John Walker, as the initials of his last name and that of his wife, Ruth. AutoCAD was the first CAD application for Macintosh. According to the home page of the company, "In 1986 the Apple II version was replaced by a new application called AutoCAD, which represented the first major change in the product's design in over three years." The name AutoCAD was a play on words. The word was already an acronym for Auto Chemical Digital Annotation, and the "D" in the acronym stood for "digital" and also for "data". John Walker liked the double meaning, and the company logo on the software, which featured the AutoCAD logo, was inspired by a slide from a presentation about the company's work. Adoption AutoCAD was soon adopted by a growing number of manufacturers, because of its ease of use, interactivity, data management and powerful capabilities. In 1987, Autodesk AutoCAD won a PC Magazine "Best of What's New" Award. PC Magazine called AutoCAD "the first serious CAD [computer-

Probability that a certain number of \$A\$'s and \$B\$'s be selected from \$n\$ people Question: Suppose  
that a sample of \$n\$ people are divided into \$A\$'s and \$B\$'s, \$A\$'s are called \$A\$'s, and \$B\$'s are  
called \$B\$'s. Each person may be either \$A\$ or \$B\$ with probability \$0.5\$ independently. What is  
the probability that the sample contains \$4\$ \$A\$'s and \$3\$ \$B\$'s? My Approach: I am trying to use  
the Binomial distribution for this question, but I am not sure if I am correct. We know that  
 $n = \left(\begin{array}{c} n \\ 4 \end{array}\right)$   
 $p = \left(\begin{array}{c} 0.5 \\ A \end{array}\right)$  and  
 $q = \left(\begin{array}{c} 0.5 \\ B \end{array}\right)$  Thus, I am trying to calculate  
 $pq = \frac{1}{8}$  So we should get  $\frac{1}{8} = \left(\begin{array}{c} 1 \\ 8 \end{array}\right)$   
However, the answer is  $4/15$ . What am I doing wrong here? A: The probability that \$4\$ \$A\$'s and  
\$3\$ \$B\$'s are selected is  $\frac{1}{2^5} \left(\begin{array}{c} n \\ 4 \end{array}\right) \left(\begin{array}{c} 5 \\ 3 \end{array}\right) = \frac{1}{2}$
