Open the file: C:\Users\YOUR USERNAME\AppData\Roaming\Autodesk\Autocad\Autocad\_Data.TXT. Find the following line: Blender\_v2 = "The Value of this line is (blender)". Change the value to the following: Blender\_v2 = "Blender (this is the name of the.exe that you use)". The last line in the Autocad\_Data.TXT is: You may want to close out Autocad and Autocad\_Data.TXT. Open the program: C:\Program Files (x86)\Autodesk\Blender\Blender.exe. Find the following line: Blender\_v2 = "The Value of this line is (blender)". Change the value to the following: Blender\_v2 = "Blender (this is the name of the.exe that you use)". The last line in the Autocad\_Data.TXT is: You may want to close out Autocad and Autocad\_Data.TXT. I hope this helps. Note: Make sure the EXE file that you use has the same version of Blender and it is up to date. Don't use the pro version. Make sure you have the latest version of Autocad. @GarethSion, the reason why the command prompt is asking you for a file path is because you didn't specify the path to the executable file you're trying to run. The problem with your current solution is that you need to have the file path to the executable in the command prompt, and you have no way to know where the Blender executable file is located. There are many ways to go about solving the problem, but the easiest way would be to right click the Blender executable file and select "Run As Administrator", then click on "ok". If you have multiple Blender executable files, you can click on the file of your choice and select the "run as administrator" option. You can also browse to the folder where Blender is installed, then select the Blender executable file you wish to run. Let me know if this helps. 1. Field of the Invention
