I'd sit between them, and I'd ask them questions. I think I wanted to know if it was always that way. If their relationship had been in the papers back then. And yes, it was. So you could call me a sourpuss. I've always liked the last train. It's a different sort of steam engine: old, black, doesn't spit. These days, of course, it's all about miles and time and location and dead time. But there's something to be said for rail travel. And there's something to be said for silence. I was reading Lisa Tougas' book. It's about the woman who worked as an assistant at the Last Train to Paris cafe in New York City. The cafe closed in 1969, but she stayed on to manage the place. A great little book, that puts me in mind of my childhood dreams of being on a train somewhere, to Paris. Some day I'd get a job like that. Some day I'd write a book. And I'll certainly be there when it's done, along with all of ca3bfb1094

Q: What are the good ways to migrate servers without downtime? I would like to know, what are the good ways to migrate servers from one location to another with least downtime. I am using a Windows OS and an Oracle DB. A: Some good ideas are to do this in the middle of the night (or even a good chunk of the day) with most people on holiday, with other projects or even projects not having a need to use those machines being available. Also, running applications that the workload depends on the database. I'm looking at you, Exchange. A: Buy one box in each location and set up a link between them. Set up a cron job that runs once a day and copies the data to the other server. Most cron implementations are cheap or free, and are much faster than a full transfer. Save The Fish!
