The disease-avoidance behavior of transgenic Arabidopsis plants was enhanced by addition of carrier seed containing free β -Nal. The behavior of β -Nal-refrigerated transgenic (Tg) and carrier seed, β -Nal-refrigerated Tg + carrier seed and carrier seed in a Tg-free environment, was determined. The results showed that β -Nal-refrigerated Tg seed increased the disease-avoidance behavior compared with the behavior of seed, refrigerated without β -Nal, and β -Nal-refrigerated Tg seed. We're still in the early stages of this project, but it's an exciting project for us all and we are just starting to get to know the players. We're testing people at shows.
