System.MissingMethodException I'm trying to learn how to build a Windows
version of my app on Mac using the MonoTouch Framework. So I've started a new
Mac OS X 10.7 Lion OS project and created a few screens, then I tested it on the
simulator and it worked fine. After that I created a new Windows 8 project in
XAML and tried to make an iPad version, but I got:
System.MissingMethodException in the AppDelegate class there's a method -
(BOOL)application:(UIApplication *)application
didFinishLaunchingWithOptions:(NSDictionary *)launchOptions and I don't know
how to handle this exception. Can anyone give me a clue about how to handle
this exception? Thanks A: The "normal" answer to that exception message is that
the method you're referencing isn't actually missing, it's right there but it's a
private method. Private methods have special compiler rules (among other
things, no runtime checks). To get access to them, you need to pass the
-[UIApplication application:] method to the compiler as a compiler directive:
[DllImport("__Internal")] private static extern IntPtr application; //... elsewhere in
the file var app = (UIApplication)application; This tells the compiler to treat the
method as a compilation-time directive, instead of as a method to call at runtime.
The compiler turns it into a static call to a "hidden" (internal) assembly method,
which is then called when you try to call the method. So it knows to look for the
method in your.dll, which is what you want. This might not be exactly the right
answer, but it's the answer that people who read it on SO will think is the
"correct" answer. Multiple pessaries in the management of large pelvic fluid
collections. A patient with a pelvic abscess from which a large amount of fluid was
drained was referred to us for concomitant
