GiMeSpace QuickMenu was reviewed by Maelo, last updated on February 15th, 2013Q: Why did the republicans repeal the income tax? This idea has evolved in my mind many times in recent years. Why did the republican party repeal the income tax in the fifties? A: In your context, I think it's useful to point out that we don't really get political/economic theories when it comes to early 20th century American history, because in general neither side of the debate had highly developed theories. This was an era in which the economic "theory" was taken as a given: that the state is to provide for everyone, so the question is how to distribute the existing resources more fairly. Both liberals and conservatives generally had an ample supply of abstractions to describe their goals, but they had

But this interior walkway at Dongguan Xin's New Hanover Airport is one of a kind. Using recycled materials, the corridors are packed with shops, bars and restaurants. The space was designed by Beijing-based company Earthmind, which is famous for its environmentally-friendly office spaces. The massive structure is mostly made up of wood and plastic, and is covered in all kinds of natural materials. A nice touch: the floors are made to feel like grass and the walls look like bamboo. It's one of the more creative and unique airports around, and definitely worth a look if you're traveling through. In addition to the exposed wood, the space is filled with natural materials and installations, like this large mural of peacocks. The airport is highly recyclable, and much of the wood can be used again. We're not quite sure what to make of the staircase, which looks like a giant pile of spilled trash. It's unclear how this structure works and what the purpose of it is — perhaps it's intended to help people enter or exit the airport. Either way, it's an interesting look at transportation. Details on the airport and the project are scarce. The company behind it is called "Xin's New Hanover Airport," which suggests that it's a private project. However, it's not

exactly clear whether the work is entirely private, although the airport does seem to be used by a lot of major players. We'll update when we know more. [Images: Earthmind, Xin's New Hanover Airport]Sonoran Hot Sauce: An Interview with Fred Gayle Sonoran Hot Sauce:
