## What's New in the?

The new programmatic way to apply autocad markup changes to drawings will be very familiar to experienced users. With the introduction of the marker toolset we are making the process much easier for users to be more productive by automatically applying autocad markup to a drawing. Instead of you having to go to the drawing, select the settings of the tool, click on the Markup Aspect you want, and then click another panel, or close the settings. It is much more efficient and user friendly. We have included the Markup Assistant and Markup Assistant2, so you can now quickly select your options in the drawing. You can still go to the Markup Aspect panel and do it the old way, but we want to simplify the process and save you time and frustration. We added the new marker feature to the left side of the Markup Aspect Panel for fast results. All of your existing right-side AutoCAD markup will be preserved. 2) Making the Markup Assistant2 more robust, we improved the highlighting of text and graphics to make it easier to review content. (video: 1:07 min.) You will be able to access more information about the drawings you are working on and are more efficient when you select a drawing for markup. (video: 1:17 min.) Also, the Markup Assist2 now shows markers as arrows in the margin so you can see what will be impacted by the changes you make. UI Improvements: We've given the ribbon a refresh with a few new features and improvements: Renamed many tabs to follow the ribbon paradigm, like "Application", "Drawing", and "Markup". Added additional graphics for drawing tabs to visually identify them. Added an "About" tab to the ribbon, to help with quick updates. We have added a number of new commands to the menus. We have added a new "Quick Tools" menu. We've added a new "Step Into" command. New Features: Automatic Text Labeling and Font Selection: Automatic Text Labeling is now part of the default toolset. We've made it easier for you to create text and label objects. We've made the process easier for you to label your text. You
