It seems only VST plugins are supported by QB Mute. A. VST plugins are not supported by QB Mute, but you can use it with Audio Units plugins in Mac OS X 10.8 or later. VST Plugins (Apple only) are not supported because of patents. If you need to use VST plugins, for example, you can use the Virtual Studio Suite. In Audio Unit Plugin (Mac only) : Q. It seems only Audio Unit Plugins are supported by QB

What's New in the QB Mute?

QB Mute is an audio plugin designed for creating the most realistic and professional-looking de-activation of the effects of the middle and rear speakers and headphones when you listen to music. The plugin includes a variable effect speed and invert option so you can have the front speakers fade in and out with equal speed, but have the rear and headphones fade out and in with different speeds. In addition, the plugin allows you to invert the rear and headphones, which will make the rear speakers and headphones fade in and out with different speed. It will also allow you to create special effects such as having the rear speakers fade out and in with equal speeds but create a louder sound or having rear speakers fade out and in, but cut the sound of the rear speakers half while the sound of the headphones are kept almost the same. - Variable speed of effect. - Invert effect of rear and headphones. - Rear and headphones fade-in and fade-out option. - You can also use EQ or dynamics plugin to control the effect of the plugin. The Voicesoft Xpress is one of the most powerful, easy-to-use and efficient software:
