I am starting with a list of addresses (I need to get the Lat, Long, and name) that have a search address. The problem is that I can only use one geocoder. The second geocoder can sometimes be null. How do I know when to get the details out of the second geocoder or stop and check the other if it's null? var request = Service.Search.List(request.Text, request.Keywords, request.MaxResults, request.Geo); request.LocationTypes = LocationType.Addresses; var placeResultList = request.Locations.GetResponse().Result.Select(y => { return new LocationInfo { address = y.Address, Latitude = y.GeocodeResponse.Geometry.Location.Lng, isEmpty = false, hasResults = false,
