Note When you save an image, you have the option of saving it in a `_.psd_` or `_.dng_` format. `_.psd_` format is the preferred format for saving and editing images. If you're saving an image to a `_.jpg_` or `_.tiff_` format, it may not open as easily in another photo-editing program. ## The Tools Panel The Tools panel is where you can access any of the image-editing tools. In other programs, the tools are grouped together in a tabbed panel. In

Photoshop, they are arranged in the Tools panel on the left side of the screen. While you may be comfortable editing a photo in Photoshop, chances are, you don't know how to use every tool in the Tools panel, so if you don't see a tool or the functionality you want, you can always find it in the menu. In fact, most of the Tools panel's tools are available in the menus. Adobe has assigned a couple of functions to some tools, but as with other features you need to know how to use everything in the Tools panel.

Elements gives you access to all the features of Adobe Photoshop at a significantly reduced price, while being much more streamlined and easy to learn. The 'classic' Elements version: In the heart of Elements there's the heart of Photoshop - the intuitive, easy-to-use tools that it simply won't let you bypass. To get Photoshop's most advanced tools, you'll need to open the 'photoshop.appex' file. The program comes with over 400 downloadable

brushes and 8,000 Photoshop Actions. This gives you numerous ways to create your own art. Use it to edit photos and make creative designs - just like you would with Photoshop. Elements now has 27GB of storage to help you create big projects. The 'advanced' version: If you want a full version of Photoshop you can get it by purchasing Elements 'advanced'. You can get this version from Mac App Store (Mac OS) or Adobe or the Apple Store (iOS). The advanced version has the same tools as the

advanced version of Photoshop. It also has an optional set of extensions to get features that you want. Adobe Photoshop Express: Photoshop Express is a stripped down version of Photoshop to help you edit, create and share your digital photos right from your web browser. Check out the 'classic' version of Photoshop Express [here](#). Read our FAQs for more information. Adobe Acrobat: Adobe Acrobat is a PC program for opening, viewing, printing and annotating PDF files. Acrobat is essential for viewing

all kinds of files, including:

John Adler: I'll let you finish.
[Laughs] Peter: A little more soft pedal on the David's Goliath-ness, if you can. [Jokes] John: We're in love with these guys. And then you add to that, like, for example, you've got a whole kit and kaboodle, everything you can think of, with what they've been able to do, you know, a lot of people started very early, starting with a mom and dad saying, "We're going to play this sport." And then they

continue to push it and they continue to better it. And I think that's how you get to that point with them. Peter: And just as a fun little segue from the video that we played, you've got a 'home-based video' coming out. John: Oh yes. Peter: A lot of the younger video makers who we've featured, it's amazing to see the—I mean, even just seeing the 'industry' evolve so much in the last couple of years—they may not actually be based in Los Angeles or New York, but they're hitting it out of their house in a way that's totally

groundbreaking. And it's really cool to see—just your history through football and through video, it's impressive. How does it feel to see that take hold of the masses and that's kind of what you're doing? John: Oh, I love it. It feels good. I'm always amazed when I go to video and I talk to some of these guys out there and they're really focused on this technology, this ability they have to reach people, what they think they can do. And just in different ways with different tools, with different gadgets,

whatever you want to call it. It's been amazing for me to see that many people out there like what we're doing and how they use these things. It's very gratifying, very gratifying, to see some of the things that we've been able to do. It's kind of fun to see the technology in action. Peter: And it seems like those tools are, like we say on the 

What's New in the?

1. Field of the Invention The present invention relates to a solid-state image

pickup device and its manufacturing method, which includes a first semiconductor substrate; a second semiconductor substrate, on which a pixel region and a peripheral circuit region are formed, and which is electrically joined to the first semiconductor substrate; and a photosensor, having a photosensor region, in which a photosensor is formed, and a light-shielding film region, which is formed over the pixel region and the peripheral circuit region, over which light from the

peripheral circuit region except for the photosensor region is shielded. 2. Description of the Related Art In recent years, solid-state image pickup devices have been miniaturized, resulting in increased light incident on light-receiving elements, the surface area of light-shielding film regions, which prevent light from entering light-receiving elements, decreased, and a need for thinner light-shielding film regions, resulting from miniaturization, has arisen. FIG. 6 is a cross-sectional view of a conventional

solid-state image pickup device 500. As shown in FIG. 6, in the conventional solid-state image pickup device 500, a transfer electrode 501, which is used as a transfer gate for transferring the charges of each pixel, is disposed on the first surface of a first semiconductor substrate 500a. A light-shielding film region 503 is disposed in the pixel region of the first semiconductor substrate 500a, and a light-shielding film 505 is disposed between the light-shielding film region 503 and a light-receiving

element 503a. In FIG. 6, reference numeral 504 is a substrate interconnecting region. In the conventional solid-state image pickup device 500, the light-shielding film 503 is formed, by the formation of a light-shielding film region 503 and the light-shielding film 505, which are opposite to each other, on the first semiconductor substrate 500a. A side wall 503b is disposed at the side of the light-shielding film region 503, which faces the light-receiving element 503a, on the side of the light-receiving

element 503a. The light-shielding film region 503, formed on the first semiconductor substrate 500a, also serves as an element isolation region for element separation. The light-shielding film region 505 is formed, by the formation of the light-shielding film region 503 and the light
