In fact, some people defend them by suggesting that Black Lives Matter is specifically focused on Black lives while Red Lives Matter is focused on white lives. This whole "Red Lives Matter" thing has been around for a few years, and it's especially taken hold in the right-wing media. Fox News has run segments pushing the idea, and in 2016, [af5dca3d97](#)

Edit the application options. The first item in the options is "Tools" > "Coordinates". Check the "Use automatic coordinate origin" box and click OK. Choose any arbitrary origin in the work area of the drawing. When you choose the origin, you should see it move the origin to the bottom-left corner of your work area, as shown here. The grid lines and cells should now all have the origin at the lower-left corner of your drawing. Add a new sheet, and any other sheets you want. Start a new drawing. Add a circle to the top-left corner of the sheet. Bring the origin to the circle, as shown here. From the View menu choose "Snap to Grid" and press OK. Press the OK button again to deselect the first, newly added sheet. Press the New button. Enter "circle" as the name of the new object. Enter any radius, usually around 12.5 cm. The radius should be greater than or equal to half the drawing width or height. Enter the center of the circle on the first sheet. As usual, press the OK button to save the object and return to the previous menu. Choose "Edit > Snap to Grid" and press OK. It will probably take a while, so you can press the button to show the status bar. When it has completed, you will see that the new object is set to Snap to Grid. Close the application. Select the circle and choose Edit > Snap. The circle is now connected to the drawing's grid. Use the Snap Edit menu to choose the menu item of your choice. By default, the Snap menu contains items for mirror, move, rotate, and scale. We will be making the circle 3 cm larger, which means it will have to be scaled by -3. Press the Scale menu item and then click OK to scale it. There is a flyout menu that contains items for everything in Autodesk AutoCAD. Close and reopen the file. Save the file. Sample result If you have not already done so, you should close and reopen the file.
