Download

I don't have the skill to do that if i wanted to. Help me! A: You can download the result of your script (a csv file) and read it from PHP. Your script is: `if (file_exists($path)) { $handle = fopen($path, "r"); while (($line = fgetcsv($handle))!= FALSE) { $possible_emails = explode(",", $line[2]); $result = $possible_emails[0]. $possible_emails[1]; } fclose($handle); echo $result; }` and you can read the result from PHP as: `$fileContents=file_get_contents("result.csv"); $fileContents=explode(",", $fileContents); $fileContents[0]="email1@yourdomain.com"; $fileContents[1]=Email to whome you want to send email; file_put_contents("result.csv", $fileContents);` Physicists in collaboration with an organic chemist have created the first receptor-like molecule that could trigger a change in the properties of a material. The new material may help provide quantum computers with the ability to store and process information. The team, led by Professor David Leigh from University College London's Department of Chemistry, produced the 'molecular switch' by incorporating a new ligand, or organic-based bridge, into a crystal. A crystal is a material which has perfectly regular, three-dimensional structures that consist of many small molecules called atoms. Without the precise arrangement of atoms, a solid is not a solid but just a heap of atoms. It is possible to incorporate atoms into a crystal to form 'semiconductors', which are materials made of regular arrangements of atoms. Traditional semiconductors have come from all types of metallic (a metallic material made of atoms) or insulating (not conductive) materials. Seeking new types of semiconductors is very important as it would be useful in creating new types of devices and in improving their existing features. When applied to batteries and solar energy cells, the material could significantly improve their
