There are many ways to get a hold of iTunes media. The most obvious is to hook up your Mac or PC to your TV and find out whether the media on your computer can be accessed using that platform. Even if you never connect to a TV, you can still use a device like Roku to stream content from your iTunes library. To stream content, all you need is to set up iTunes on your Roku device and to log in. It will ask you to verify your username and password. Once you have logged in, you will be prompted to add content. You can find a list of available content on the welcome screen. If you don't see what you are looking for, you can use the search field to help you find content. Once you have found content to stream, you can select it. You will then be asked to approve content. On a Roku, you only have a few options for displaying content. If you want to browse using other players, click Browse. If you want to listen using a particular player, click the link for that player. For instance, the music button will open a page that lets you browse to your music library. On the other hand, the TV button will link you to the channel that will be used to display media on your Roku. Once you have selected the content to be streamed, you can click the "Play" button to start the playback. On a Roku, you can only choose between playing content using a device or Roku media player. In case you have a Roku player, all the content will be streamed to the device. If you don't have a Roku player, content will be streamed to your TV. On a TV, all the music you have will be displayed in the list. You can simply select your content by clicking on it. If you want to change the display order, click the "Up" and "Down" arrows. Roku users will be happy to know that they can use shortcuts to change tracks. You will find them at the top of the window. Lonely Planet is a popular brand in travel guides. Offering text editing features and text-to-speech capabilities, the Speaking Notepad is a small software application that carries out the task of simply listening to the text being spoken aloud. Main features • Simple looks and importing options You are welcomed by a clean feature lineup that allows you to type in the text message directly into the main panel or paste the information from the clipboard. Additionally, you may import data from plain text file format. • Main features Speaking Notepad gives you the possibility to simply press on a dedicated button for hearing the text being spoken aloud. What's more, you are allowed to print or save the text to plain text file format, undo or redo your actions, perform basic editing operations (cut, copy, paste, delete), look for words and replace them, and insert time/date stamps. Last but not least, you can alter the text in terms of color, font, font style, and size, as well as check out the total number of words comprised in your document. • On the downside, Speaking Notepad doesn't offer support for advanced features that could help you alter the volume and adjust the speed of speech. • Performance Since it doesn't offer support for many tweaking parameters, even less experienced users can make the most out of this program. Tests have shown that Speaking Notepad carries out a task pretty quickly and provides good audio quality. It doesn't eat up a lot of CPU and memory, so the overall performance of the computer is not affected. • Bottom line All in all, if you are looking for a straightforward text editor that provides support for text-to-speech capabilities, you may give Speaking Notepad a try and see what it can do for you.
