

MySQLBackupFTP Crack X64 [Updated-2022]

[Download](#)

MySQLBackupFTP Crack + Download

MySQLBackupFTP Crack Mac is a comprehensive and practical utility, especially designed for database administrators who need to backup specific MySQL databases and store them to a FTP server. Using MySQLBackupFTP Cracked Version you can also run scheduled backups of MySQL databases and store them on a network or local folder, FTP server and even in the cloud (for example, you can save them to Dropbox and SkyDrive). Firstly, you need to configure the connection settings. This way, you can connect to MySQL databases using the TCP/IP protocol or phpMyAdmin. In both cases, you can create scripts that later can be used to restore your databases. Specify the hostname and the port number, then test the connection. After that, the application will display all of the available databases in the left panel. However, if you want to change the server settings, you can access the Tools menu as well. After selecting the databases you are interested in, add a new destination where to store the backups. You can choose between local or network folder, FTP server, Dropbox, Google Drive, Amazon S3 or SkyDrive. Each of them provides advanced settings that help you secure your backups. What's more, you can schedule backup jobs effortlessly. You just need to select the estimated backup plan that suits your needs and the application automatically backups your databases, without interfering with other software or displaying annoying pop-up messages. However, working as a database administrator for a while, you are definitely aware that large databases create temporary files and might require extra time to complete the backup process. To avoid running out of space, you can set a custom temporary folder where all these large databases will be stored. Using MySQLBackupFTP Free Download you are able to backup MySQL databases, tables and scripts to various locations such as cloud services, local or network folders or FTP server and send e-mail confirmation on the task's success or failure. MySQLBackupFTP Download ===== MySQLBackupFTP for MySQL is a handy and comprehensive utility, which helps DBAs to backup specific MySQL databases and store them on FTP server or local or network folders. When you want to backup the MySQL databases and save the files in a secure location, using MySQLBackupFTP you can use a simple wizard to create database backups and store them on local or network folders. Specify the hostname and port number, then test the connection. After that, the application will display all of the available databases in
