Three brands, three things, two different world's? But these three brands are all one, they share one goal: to create the best experience for their consumers. And one thing unites them: the passion, heart and desire to create. From their brand design guidelines, to product strategies, to company culture, all three brands and teams work to create innovative new features that drive the future of their products, bring together and empower their communities. These three brands are Adobe, Pixar, and Disney. When it comes to designing their products, Adobe constantly evolves its design system. It's based on a set of principles that translate innovating ideas to the best user experience and design-driving standards that impact all future products and services. Opinions and design thinking aren't just part of the product design process; they're baked into the DNA of the team making the decisions. Digital design is a complex undertaking, and each team takes ownership of its unique function and role. They're also responsible for driving consistency across platforms and devices, interfaces and platforms. The design system is the basis for product development. It ensures the consistent implementation of visual design and brand messages across formats and platforms. It's not just about what it looks like, but how it works as a whole. It's been one of the most important drivers in the development of Adobe Creative Cloud. One of the coolest examples of Adobe being collaborative has been the rise of Adobe Sensei. This is a technology that can recognize and take advantage of the world we see every day in all of our photos and images. The ability to expose the world in unique new ways, transform our relationship with technology and every day events, and provide recommendations that can improve our experience using Adobe software is truly remarkable. The goal of the Sensei research team is to fundamentally rewire consumer behaviour. In a paper last year, the team set out to understand how we think about the world through the lenses of language, emotion, humour and the ways our brains process the visual information that shapes it. In this pursuit, we've discovered an entirely new way of looking at things and the things we can do with it. User understanding of a word or a concept is one of the most powerful ways we can communicate with each other. Applied to photos and images, applying our understanding to how we create, share and use them is an opportunity to become even more fluent in expressing ourselves, our emotions and also to think more creatively and connect with the people around us. The team is releasing the new Moodle interface, new tools for Depth Matching and for 2057 Projectors. We're also bringing existing assets and services, such as Adobe Sensei and Adobe Analytics, together to make them easier to access and use throughout the Adobe family of products. And they're ready for you to use.

Adobe recently introduced smart previews to its popular creative suite applications. In a Photoshop CC 2019 beta release, the company's team has added the ability to preview pixels of an image, quickly making an accurate guess as to what an image looks like when saved. These smart previews use AI to run a neural network and analyze an image on its own. It's the first time any photographer has ever had an estimate of precisely what pixel values will produce the best results in a saved file. The release of Photoshop CC 2019, Photoshop CC 2020, and Photoshop 2020 was driven by feedback from the creative community. Their feedback included the need for faster, more consistent performance, which is where the new Lens Correction feature came from. Previously, design requirements were met by individual users—users have been known to edit, sharpen, and otherwise manipulate an image until they achieved the result they wanted. But without consistency, there was no way to know if they were on the right track, or if they were going in the wrong direction. Now, those pixel values can be measured by analyzing images after conversion. An advance image editing software for editing, improving, modifying, and compositing raster images, which Photoshop uses vector graphics. Well-known names such as company like Adobe, can use Photoshop as as part of their marketing strategy for creating and designing intense and endearing corporate identity. Photoshop offers a real advantage in graphic design.
