Since CS4, the software prompts me to add some 'feathers' to my drawing by lowering the brush size just a 'bit' after every stroke, which I think is a nice addition. It creates a softer stroke, as is possible with the Pencil with natural pressure. I use the Pencil quite a lot in CS5, mostly with the brush, but the middle of the options — using the Pencil as an eraser — is very powerful. I have also used the Pencil with the brush fairly regularly when needed and it works — it even smears if it gets triggered to erase at a higher acceleration. The software as usual offers a myriad of adjustments and filters, but not all of them work well. In some cases, the Corel Painter brush does a better job than the ones provided by Photoshop. For example, it makes invisible scratches visible with a stroke that has the smallest diameter. Such elements are, however, not as good as the ones found in the midtones and dark tones of the RAW file. A popular mode in the painting programs is the 'marble' texture that has since been replaced by some other mode or effect in CS5. The CS5 version does seem a little more 'solid', although it is still quick to render. Clipping Me, the clipping mask option

on the Layer, is very handy, but unfortunately it seems to be missing in CS5. When you attempt to create a new layer, no edges are highlighted in the tool palette, which is very inconvenient, to say the very least. While the software recovers layers through the Layer-By-Layer method, it is not good at cropping or erasing layers and I have found it to sometimes add unwanted portions to the image. When you attempt to remove a selection, the software merely removes the edge of the paper (the one inside the transparent sphere, in this case), even if you stop and try again, the first effort is discarded. I suspect that some portion is probably stored in the temporary buffer, because when I attempt to erase a selected group of pixels, it only removes the edge, while the interior remains.
