Now, I have to note that Lightroom's adjustment tools work differently on the iPad. Instead of being all in the toolbar, the sliders that control the 16 adjustments reside in the top right corner. I find this a synthetic way to "present" the sliders. Lightning-fast performance is also essential on an iOS device. If you load the adjustment window and load a RAW file, you'll find the process is still fairly complex and time-consuming. Moreover, adjusting the sliders can result in the app becoming totally unresponsive at times. I would have preferred to see the adjustment settings continue to reside in the toolbar rather than the corner of the screen as with the desktop. This was not a major problem, however. Overall, it was a very good update to the iPad version of Lightroom. Here's another note: In the mobile version of the program, including when using the different adjustment sliders, you have access to the following features: • Prior Export, which is a button to reopen the image from the previous Lightroom export; • Retouch, which eliminates red areas from skin; • Smart Filters, which only appears if you're using the Canon or Nikon export profiles; • Color Adjustment, which is the same color adjustment tool that exists in the desktop version of Lightroom; • Transform, which allows you to rotate, flip, and crop your image; • Warp; • Shadow and Highlight; and • Highlights, Shadows, and Clarity. The most obvious reason for upgrading is Photoshop. But you also get new features, including reference images, new filters, and a huge online service that delivers library images and other resources.

What It Does: The Fill tool, formerly the Paint Bucket tool, fills any solid area with the color of your choice. It's great for solid backgrounds or coloring large areas. It can also be used to apply patterns to your images. The Gradient tool within the Fill tool lets you create a nice, faded background effect of the color of your choice. Adobe

Photoshop doesn't try to be a full featured alternative to Lightroom, its purpose is to be a photo editing and organization tool. It doesn't have all the capabilities that Lightroom does, like multi-image workflows and has a small but growing set of functionality.
