The old interface was ad hoc. There's no apparent rhyme or reason to it. The new one is easier to get to grips with, and keeps the file names. Rather than painting a 6 or 8 into a 1×1 GRID, the new one is more like: 1/6/2016 9PM Pixel View.jpg. The icons flow from easier to deceiving. For example, there's no home button. Instead, once you clicked '1×6' the next row would be ½×6. That's harder to do with a hard-to-reach button like the previous versions. It's also a bit of a pain that you can't drag and drop an image onto the Sketch Book window. You have to open up the image in a new window. Somehow, this is less annoying than the older version. Still, the old placement of the image browser is better. When working in the new Photoshop Sketch, you have to use the new artwork browser. That's annoying. The Artwork Browser has been here all along, and you can use it in Photoshop as you work, selecting files as you go. In other words, you can keep visibility of the Artwork Browser a bit more intact. But in Photoshop Sketch, you have to use the old-fashioned file browser. And well. The old workflow is going away. And there's no backward compatibility, no different behaviors for file types. If you want to work in Sketch, drop the file into it. The new features are being rolled out through a series of Adobe Muse upgrades.
