Adobe hasn't really added many new features to the program in the last few years. Things were considerably better in the past. Lightroom 5 has been out of preview for less than two weeks. Will there be any other updates? We'll find out in the next few months. Knowing that, I do feel a bit bad for Sony users. I have to confess that I have the impression that the only reason they are adding the impressive features to the initial version of Lightroom is to impress casual users with minor improvements so they'll later use the software on their Sony cameras. But that's my personal opinion, which, as you can probably tell, doesn't really matter a whole lot. Come October, I'll be back and will put this review in the "Recent Developments" section, so keep an eye out for that! For now, I'll list all the changes since version 4.3, the previous Lightroom release. **ABOVE:** Heading effect of a character from ThunderCats. **BELOW:** Character from the Goonies. **BELOW:** Dragon-eye from NYC. **BELOW:** Everyday Life for Animals - Info from the PaintedEyes website, which is dedicated to our creation of the illustrations in this review. Nightly builds of Lightroom 5 are available for download. They always contain numerous bug fixes and changes of the latest versions and stability. Version 5.0.1 points the way for programs initial release. It comes with some minor, and some rather major, changes. The new version is available for the Mac and Windows platforms. Aside from the obvious default location change implemented in Lightroom 4, Lightroom 5 has also received a new default user interface, with a couple of new features. One of them is the slightly taller user interface section at the top, just like the old interface. Another new addition, which isn't as important, is a Dock icon that makes it easier and quicker to open one of the various sub-menus, such as the Suggested Tags.
